Professionals

See What I Can Do

SBVI helped me in so many areas – home management, orientation and mobility, and industrial arts.

Training gave me confidence to go out and seek employment and also help out in my community.

After training at the Rehabilitation Center for the Blind, I can do basically everything I could before the accident.

Rehabilitation Counselors...

provide guidance and assist individuals to obtain employment based on their interests and abilities.

Training and assistive technology for the workplace.

Hands-on training to reach a vocational goal.

The SD Rehabilitation Center for the Blind...

is a residential training center in Sioux Falls where eligible individuals from all parts of South Dakota participate in intensive skills and employment training.

Rehabilitation Teachers...

provide training and devices to older individuals with vision loss to increase their independence in their homes & communities.

Skills are taught to resume leisure activities with vision loss.

Low vision devices allow people to be active members of their communities.

Techniques are taught for home management including cooking and cleaning.

Communication techniques and products assist with access to information such as newspapers and correspondence.
